GitHub Actions

Generic workflow engine

- Actions intro
- CI/CD: pipelines
- Events
- Examples
 - Make your own adventure!

What are GitHub workflows?

Execute one or more **Actions**

Workflows triggered by events:

- Push
- Comment
- Creating an Issue
- Release
- Etc.

What are GitHub Actions?

- Steps in the workflows
- Basis: Run a shell script
- Create your own
- Use an existing one from the marketplace

Workflow example

```
🔍 main ▾ dotnetcore-webapp / .github / workflows / dotnetcore.yml
1  name: .NET Core
2
3  on: [push]
4
5  jobs:
6    build-and-deploy:
7      environment: Production
8
9      runs-on: ubuntu-latest
10
11     steps:
12     - uses: actions/checkout@v1
13
14     - name: Setup .NET Core
15       uses: actions/setup-dotnet@v1
16       with:
17         dotnet-version: 3.0.100
18
19     # dotnet build
20     - name: Build with dotnet
21       run: |
22         dotnet build --configuration Release ./dotnet-core-webapp/dotnetcore-webapp.csproj
```

Most used triggers

on:

push:

pull_request:

workflow_dispatch

Available triggers

- branch_protection_rule
- check_run
- check_suite
- create
- delete
- deployment
- deployment_status
- discussion
- discussion_comment
- fork
- gollum
- issue_comment
- issues
- label
- merge_group
- milestone
- page_build
- project
- project_card
- project_column
- public
- pull_request
- pull_request_comment (use issue_comment)
- pull_request_review
- pull_request_review_comment
- pull_request_target
- push
- registry_package
- release
- repository_dispatch
- schedule
- status
- watch
- workflow_call
- workflow_dispatch
- workflow_run

Demo time!

Issue automation

- Notification setup for your team (on new issue...)
- Issue that closes itself when 🐞 is not included in the name
- Workflow that automatically labels an issue on creation

Profile updates

- Update profile readme: blogposts / streams

Administration stuff

- User automation: create repos and send invites
- JIT Admin rights
- Monitor self hosted runner counts

Action management

- Scanning for used/available actions in your org
- Security scanning on boarding actions
- Fork updater

Action marketplace

- Monitoring the actions marketplace
- Analyzing the actions marketplace

Project automation

Team processes

- Publish releases as Sprint completion notes (with webhook trigger from JIRA)
- Engineer onboarding process instead of a wiki
- Async standup

Getting started

New user creates an issue: [Link](#)

New user
creates an
issue: [Link](#)

workflow:

```
1 name: Welcome new user
2 on:
3   pull_request:
4     types: [opened, closed]
5   issues:
6     types: [opened]
7 jobs:
8   run:
9     runs-on: ubuntu-latest
10    permissions:
11      issues: write
12      pull-requests: write
13    steps:
14      - uses: wow-actions/welcome@v1
15        with:
16          FIRST_ISSUE: |

OSSF Scorecard

README . md

DevOps-Actions is an organization by [@rajbos](#) to hold all the actions he has been creating. These are used for things like:

#	Description	Link
1	Internal Marketplace for GitHub Actions	repo
2	Request repo for validating and adding actions to the internal marketplace	repo

Reach out to Rob on [Mastodon](#) or read more info on his blog <https://devopsjournal.io>.

OSSF Scorecard overview for the repos:

Repo	Score
issue-comment-tag	openssf scorecard 6.9
json-to-file	openssf scorecard 8.7
load-available-actions	openssf scorecard 7.1
load-runner-info	openssf scorecard 7.9
load-used-actions	openssf scorecard 7.9
action-get-tag	openssf scorecard 7.8

Actions management

Best practice:

1. Review the action
2. Fork the action

<https://xpir.it/universe-2021>

Actions management

Best practice: **Review** the action

Examples:

- Synopsis: [detect-action](#) (src/detect/detect-manager.ts)
- Setup-Terraform: [link](#)

<https://xpir.it/universe-2021>

Actions management

1. Scanning for actions
2. On-boarding actions
3. Fork updater

Stand up for your choice!

Get Access to Splunk #133

 Open  github-actions  bot opened this issue 3 minutes ago · 0 comments

 github-actions  bot commented 3 minutes ago

/ insert gif here

Request for Splunk access from SNOW

 github-actions  bot added the  splunk label 3 minutes ago

 github-actions  bot assigned  rajbos 3 minutes ago

```
const issues = await github.paginate(opts)

directories.forEach(function (directory) {
  console.log(directory);

  const files = fs.readdirSync(`issues/${directory}`, 'UTF8')

  files.forEach(function (file) {

    const fileContents = fs.readFileSync(`issues/${directory}/${file}`, 'UTF8')
    let arr = fileContents.split('\n');
    const title = arr[1].substring(8, arr[1].length-1)
    console.log('title: ' + title)

    // Check if there is an issue with same title
    for (const issue of issues) {
      if (issue.title === title) {
        console.log(`Issue with title ${title} already exist for user ${context.actor}`)
        return 0
      }
    }
  })
}

Engineer onboarding

The screenshot shows a GitHub repository for 'rajbos / demo-actions'. The main content is a pull request titled 'Adding onboarding setup' by user 'rajbos'. The file being added is 'demo-actions / issues / splunk / training.md'. The file content includes a table with a header 'title' and a row 'Splunk fundamentals self-study preparation'. Below the table, there is a paragraph explaining that Single Subject courses are short and free, and a list of five URLs for Splunk training courses.
